About

This report has been completed on behalf of the client. The measurements have been taken using electronic suspended load measuring devices that display the data to the nearest unit on a real time digital display. This information is then manually transferred to a computer generated form.

The stock number(s) of the equipment used have been recorded, and can be matched to the manufactures serial number. All load cells have a calibration report of less than 12 months old

The weights recorded are of the suspended load on the day of measurement. A brief description of the load is included, but this data must only be accepted with a drawing of the load, and a plan of the suspension points.

A load suspended on multiple points must be placed in a static position as expected in a normal operating environment. Readings of all suspension points must be recorded at the same time. It should be noted that the load can shift between points without obvious change in elevation. Care should be taken when using independently controlled lifting equipment to level the load.

The client accepts that changes in the load, either addition, subtraction or positional changes of equipment will change the weights present on each suspension point. Significant changes should result in the whole load being reweighed.

The recorded weight shown in this report is for the load **BELOW** the load cell. The weight of rigging and chain hoists has been included in this report, and although added to the recorded weight to calculate the "total for plot", this is an estimate only. The "Recorded Weight" is the only certified data in this report.

Every effort has been taken to ensure the accurate transfer of information from the display to the form. The client has verified the data recorded at the time of transferring. Load Cell Rental or its employees and agents shall not be held responsible for the accuracy of any drawings or plans submitted with this report.

Signed: Richard Young, Director

A handwritten signature in blue ink, appearing to read 'Richard Young', is written over a faint, larger signature that is also visible in the background.

Notes

Reference:
LCR047

- 1 The rigging plot is symmetrical in design. The weights contained within this report have been ascertained by weighing the stage left points. Where this has been done the stage right points have been seen to be carrying identical loads by LCR staff.
- 2 The load cell system was used to establish the loads in kilogram's. The readings have then been manually calculated in pounds by LCR staff.
- 3 The Descriptions contained within the report have been contributed to by all relevant specialist departments such as lighting, Audio, Video etc. Whilst every effort has been made to ensure accuracy the descriptions are to be used in conjunction with the full rigging plot version applicable to the venues in which the weight report was completed.

SHOW'S STATIC WEIGHT WAS BOTH ESTIMATED
BASED ON ACTUAL COMPONENT WEIGHTS AND
WEIGHED USING A LOAD-CELL SYSTEM

Weights

57,847 Kg

STAGE PLACEMENT IS VERY IMPORTANT.
PLEASE CONFIRM PLACEMENT WITH PRODUCTION
MANAGER, OMAR, AND ART THE RIGGER.

140 Points

- 22 = Audio Points
- 6 = Curtain Truss
- 10 = Upstage Video Truss
- 1 = Cable Swag
- 18 = Lighting Trusses
- 14 = Cable Bridge
- 6 = Audio Cable Bridge
- 8 = Cable Picks
- 20 = Lighting Grids
- 4 = Side Screens
- 5 = Fall Arrests
- 6 = Balloon Trusses
- 7 = Center Fly Track
- 3 = Whirly Gig
- 4 = US FLY Track
- 6 = Projector Trusses

Point Key & Motor Count

- 39 = 1/2 Ton Point
- 57 = 1 Ton Point
- 31 = 2 Ton Point
- 8 = 500lb 1/4 Tons
- 5 = Fall Arrests
